

Richard Leathers

BEng, MSc, CEng, MICE, MIStructE

Director

I am an enthusiastic and motivated team leader committed to finding the right solution for the client. I have a strong background of technical ability, complimented by vast experience – which includes over a decade of managing multi-discipline design teams in a broad field of engineering.

I am skilled in leading teams on large and complex projects within a multitude of sectors, including built environment developments, manufacturing, logistics and rail.

A key strength is my ability to converse on an equal level with the client, often taking a pragmatic approach to perceived problems.

Project experience includes providing engineering and consulting advice to Forterra as they progress the development of their largest brick manufacturing facilities to date.

As part of JPP's Civil and Structural Engineering teams I was appointed to come up with innovative analysis and design concepts to overcome site challenges at Heartlands Industrial Estate, a prestigious light industrial development within Daventry.

I also oversaw detailed design development of a part low rise timber frame and part multi-storey reinforced concrete frame housing scheme, one of a number of similar sites being redeveloped by Engie on behalf of London Borough of Waltham Forest.
