

Profile

Ben is an enthusiastic and motivated director, committed to moving the company forwards to ensure JPP can continue to provide clients with the high levels of service they deserve. He has a strong background of technical ability in different disciplines, complimented by over two decades of experience in the construction sector.

Ben is skilled in leading teams on a range of projects within a multitude of sectors and has maintained and developed relationships with key clients as well as personally establishing new work streams. Key strengths of Ben's are his ability to converse with clients and staff on an equal basis, identify projects issues before they arise and oversee and manage design teams guaranteeing a successful project outcome.

Project Experience

Wickes Retail Store, Crawley

Ben oversaw the design of this scheme from conception to completion. Initial scheme development works were completed client side such as management of survey works, production of reports to support the planning application and high level civil and structural engineering advice, prior to successfully working alongside the winning contractor during the tender period through to completion of the project on site under a design and build contract.

Savoy Cinema, Corby

Ben oversaw the development of the new Savoy Cinema and integral restaurants comprising Nandos, Prezzo and Spur Steak Ranches. He managed production of survey and design information from the project conception to completion, minimising expenditure for the client and driving in efficiencies throughout the design and construction stages of the project.

Khalsa School, Southall

Ben was the Principal Structural Engineer working on this project overseeing a team of technicians and liaising with clients on a daily basis. Ben's rounded and diverse design experience led to the adoption of new construction techniques, which saved time in the construction program and reduced the overall construction budget in line with the client's original design expectations.
